

Flat pressed galvanized steel radial take-offs without gaskets

ILPR

Description

ILPR take-offs offer a perfect solution for fabricating ventilation ductwork joints at heat recuperation units in single- and multi-family houses. The bevel at the joint and the pressed structure provide an excellent air flow resistance. ILPR flanges can be fitted with a gasket; ILPRL units are provided with a factory-installed gasket on the flange.

ILPR-...-C units have bare edges for fabrication of heat recuperation units, ducted air handling units, hot water coils, and other ventilation units.

Available materials — Product code example

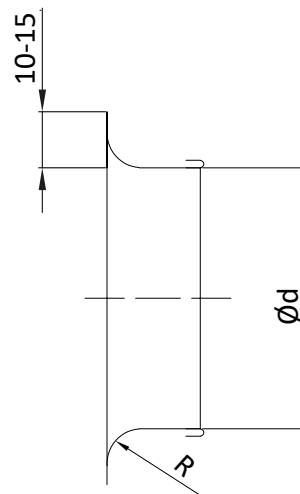

ILPR-... – galvanized steel sheet
